the world's first mobile soft-laser medical device
With the Healing Power of a Clinic

"Mayla"

"Mayla", a four years old spayed female large poodle, admitted to my clinic due to wounds that failed to heal. Her previous veterinarian removed surgically lump on her left cranial thorax and the wound never healed completely and kept oozing despite previous treatments with systemic and topical antibiotics and anti-inflammatory therapy.

I advised the owner to use B Cure laser four times a day, each time for six minutes and that for fourteen days.

At the end of the therapy the wound healed completely.

I find the B-cure laser very helpful in my clinic, easy to use with good owner's compliance, and most important-good results.

Dr. Omri Ziv, DVM MRCVS
Norway

"Che" & "Boufun"

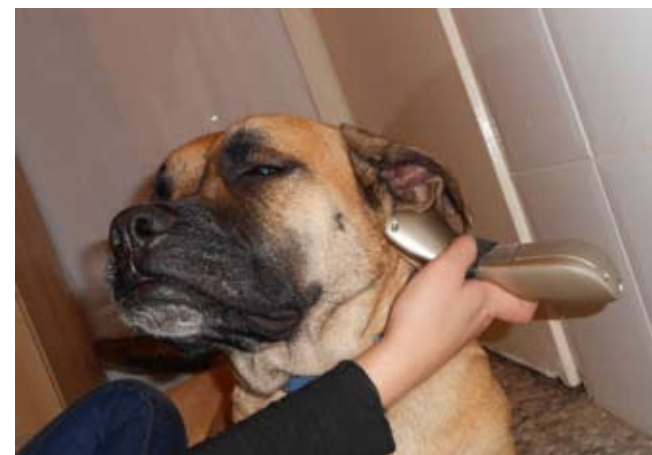

I am using B-Cure laser for the last few months with a great satisfaction.

"Che", a mixed-breed Boxer male 18 months old, has for a few months a severe dermatitis around its ears. Myself and others treated him with lots of antibiotics, steroids, bandages with not much of an improvement.

Upon application of B Cure laser Che begun to be healed and in a very short time its problems gone

Boufun, another mixed-breed Boxer male dog, was treated as well for a severe ears problems - an otitis externa non-responsive to the conventional therapy. After a few 6 minute sessions its ear problem and its positive disappeared . The dog appreciated the therapy results can be seen in the attached documents

I have been treated many horses, dogs, as well as sheep using B Cure laser during the passing months with great clinical success and highly recommend B Cure to be used for animal benefits.

Shiri Koren,
Complementary and Alternative Veterinary
Medicine Therapist Israel.

Hello!

I'm happy that I bought the B Cure laser. It helps me to perform acupuncture treatments, to treat IVDD in dogs, as well as treating respiratory problems and soft tissue diseases

Nice regards,

Dr. Sintija Pakalne, Latvia

Hi,

the B - Cure laser is so good that my wife took it from me, and now she is using it for her shoulder and elbow pain, and for now I can not use it on my clients horses!"

Dr. Jean Claude Colombo, France

Kurtscheid, Germany**

I have a 7 year old very large Hannoveraner horse which I ride mainly on weekends and holidays. Several months ago apparently the horse strained its back after strenuous riding and had to get off the horse and take off the saddle.

I could not put the saddle back as the horse was in pain, so much so that it did not allow the Chiropractor or the Veterinary to go near it.

I obtained a B-Cure Laser unit and began treating the horse in three points along the spine for 6 minutes at each position. (18 minutes) I did this twice a day for 3 days and since the horse is in a stable 10 kilometers from my home I continued only for once a day as it was difficult to go there so often.

On about the 10th day I noticed that I could brush down the horses' back without it bucking. On the 12th day I tried to put the saddle back and it accepted it without adverse reaction. I took it off and waited another 3 days (still using the laser) before I tried to ride again.

I rode for a long time and the horse showed no signs of his previous problem, and definitely believe that the laser did the trick.

The Chiropractor was amazed and immediately purchased his own unit

Andrea

"Coco"

"Coco" a male, two years old, pincher dog was admitted to our hospital with a severe head injury due to a traumatic blow. On physical examination – we found a state of stupor with a stiff four limbs, bilateral nystagmus and unresponsive pupillary reflex.

In therapy we established a shock treatment with dexamethasone, seguril and mannitol in i.v infusion. The dog was hospitalized for 48 hours with no improvement.

The dog was released home to be treated twice a day each time for 6 minutes using B Cure laser for 14 days.

Seven days later "Coco" was found to be normal.

**Dr. Joan Cunill
Veterinarian Hospital Delphis
Barcelona, Catalonia, Spain**

My name is Rachel Joshua, and I am a complementary and alternative veterinary medicine therapist. I am working with B Cure laser in cows for many months.

In the first case I would like to show a cow with a severe hind leg wound that was not responsive for a conventional therapy. The Use of B Cure laser improved the hock condition in short time and the cow returned to normal condition as far as walking and milk production.

In the next case - a bovine mandibular abscess, we treated the cow with B Cure laser and again - in a short time the cow returned to eat normally, produce milk, and for sure - solving the abscess issue.

In the last case I would like to show a combination of acupuncture and veterinary low level laser therapy using B Cure laser.

This specific cow gave excellent quantity and quality of milk in the past, but now its numbers were reduced dramatically without any improvement using the conventional therapy.

I performed acupuncture at the lower back of the cow, adding to every acupuncture point B Cure laser stimulation. In a short time the cow returned to her previous excellent yield.

Center for Analysis, therapy and training
Berlin, Germany

We had the opportunity to evaluate the B-Cure laser unit in our therapy center, where we treat and train patients with various orthopedic problems, post operative training, physiotherapy and sports medicine. We use various aids that are available for treating the problems such as electrotherapy, ultrasound, heat therapy, tens etc

This was the first time we began with laser and were surprised to see such a compact unit, very mobile and easy to handle. The patients being treated used the unit in addition to the other procedures and since we are a large clinic the patients come in only twice or three times a week. Even with this, not using it twice a day or every day we saw a much faster improvement in the patients' freedom of movement and their claim for reduced pain overall.

We will now look into the possibility to lend out units to the patients to use at home, to speed up the treatment even more. For the time being we are satisfied that the use of laser is a definite alternative to use in our treatment schedule.
